

Letters to the Editor

Dear editor

The Society of Petroleum Geophysicist (SPG) is contributing a lot to increase geo-science knowledge in India via "Geohorizons". I appreciate the work done by SPG for emerging geophysicists of India as well as for experienced one. I want to thank you for starting "Tutorial", "Points to Ponder-Questions / Answers" and "Geo-phuzzle" sections in magazine. These sections will clear fundamental doubts of students & geo-scientists. I am assuring many of us are benefited from these new sections. I want to share some suggestions with editor for the benefit of geo-scientists:

- Every publication contains a special topic and all articles should be related to that topic.
- Increase publication frequency from half yearly to quarterly
- Increase student chapter's activity.
- Introduce a new section "Student's Article"
- Increase involvement of research institutes.
- Organize Continuing Education program for universities.
- Increase industry involvement in improvement of GEOHORIZON
- Include Industry news.

I hope my suggestion will help editor in continuous improvement of GEOHORIZON

Processing Geophysicist Paradigm (India)

Dear Editor

My sincere appreciation and congratulations for some interesting changes in format and contents of Geohorizons. I particularly enjoyed Tutorial and Points to Ponder. However I have been constantly aware of a total lack of articles on non-seismic methods as well as non oil-exploration applications of Geophysics in Geohorizons. Is that due to working bias of people associated with bringing out this journal? Atleast that is what a careful study of Executive Committee 2005-2007 page in Geohorizons tends to convey. This is surprising given the fact that Geophysics journal (of SEG, USA) almost regularly publishes papers by indian workers in the field of non-seismic methods.

I will also like to see more activism by SPG (on the annals of Geohorizons) on the state of Geophysics and Geophysicists. For instance there could be a field crew/rig count for India. There is also need for a human interest articles (say historical evolution of certain methods) and even a cartoon or caricature once in a while to bring in humourous aspect of our professional life.

And yes we could always use more articles in a issue; considering there are only two issues in a full year.

Wishing you good luck

Naseer D.
