

## Technical Talk organized By SPG, India on 16.12.2014

A Technical knowledge sharing presentation was organized on 16-12-2014 by Society of Petroleum Geophysicists, India at 8<sup>th</sup> Floor Conference Hall of GEOPIC, Dehradun. The topic of the presentation was “Sea Bed Node Seismic for HC Exploration” presented by Shri C V Rao, DGM(GP), E&D Dte, ONGC and Vice President, SPG-India.

Shri Anil Sood, GGM-HOI, GEOPIC was the chief guest on this occasion. He expressed his happiness for organizing this technical talk and expressed the need for organizing many such lectures by senior ex-ONGCians, academia experts and in-house geoscientists in future by SPG at regular intervals.

In the presentation Shri C V Rao emphasized the importance of new technologies such as Sea Bed Node Seismic for HC Exploration. The cable less technology has many more advantages over normal conventional seismic and Ocean Bottom Cable data acquisition though with higher cost at this juncture. In the years to come, he expressed hope that the technology may be popular and cheaper than what it is now. Full azimuth, broad band multi component seismic data as output, the concern for cost takes back seat he said.

But again he said that, it is not necessary that any new technology is the best. One has to optimize on the basis of ones needs and techno economical scenario.

This talk was attended by full house audience and the talk was well appreciated as author put full efforts to prepare present and explain the audience for every query made. The participants were very keen and interactive during the presentation. Some key inputs were also given by GGM-HOI GEOPIC and other senior and experienced executives.

The vote of thanks was given by Shri K M Shukla, Secretary, and SPG-India with a promise to arrange more such events by SPG in the near future.
